ATM and UPI Transaction Simulator – 15 Test Cases

A. PIN verification

TC01 – Successful PIN verification

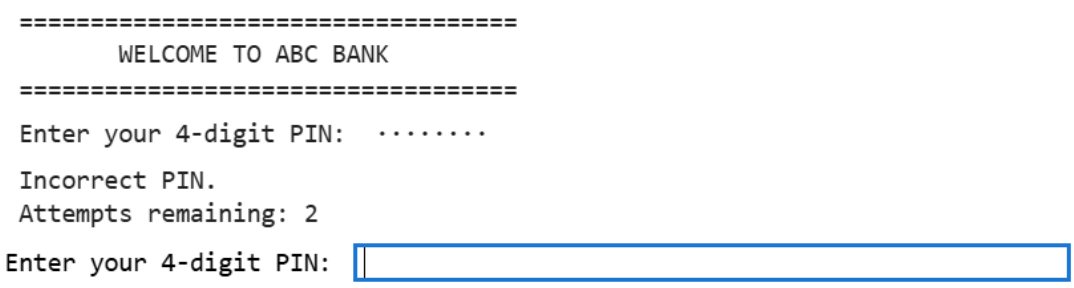

- **Objective:** To check whether the user can log in with the correct PIN.
- **Input:** Enter the correct saved PIN.
- **Expected output:** Login successful and ATM menu displayed.
- **Test Status:** PASS
- **Screenshot Evidence:**

TC02 – Incorrect PIN verification

- **Objective:** To check whether incorrect PIN entries are detected.
- **Input:** Enter an incorrect PIN once, followed by the correct PIN.

- **Expected output:** Incorrect PIN message, remaining attempts displayed, then successful login.
- **Test Status:** PASS
- **Screenshot Evidence:**

TC03 – Card blocking after three incorrect attempts

- **Objective:** To verify the maximum PIN attempt restriction.
- **Input:** Enter 1111, 2222, 3333 (assuming none is the saved PIN).
- **Expected output:** Card blocked after three incorrect attempts.
- **Test Status:** PASS
- **Screenshot Evidence:**

B. ATM operations and transaction rules

TC04 – Balance enquiry

- **Objective:** To check whether the current account balance is displayed.
- **Input:** Select option 1.
- **Expected output:** Current balance displayed.
- **Test Status:** PASS
- **Screenshot Evidence:**

```
